PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of experience building scalable enterprise applications using Angular, TypeScript, RxJS, and NgRx across banking, healthcare, and media. Experienced in modernizing legacy applications, developing reusable component libraries, and establishing shared frontend architectures that improve maintainability, consistency, and development efficiency.

TECHNICAL SKILLS

Languages & Markup: TypeScript, JavaScript, HTML5, CSS3, SCSS

Frameworks & Libraries: Angular (8 – 21), RxJS, NgRx, Angular Material, PrimeNG, TailwindCSS, Bootstrap

Tooling & Practices: Storybook, Git, Jira, Cursor, Claude, REST APIs, ngx-translate, Unit Testing, Accessibility (WCAG, ARIA),

WORK EXPERIENCE

Software Engineer — Coditas, Pune Jun 2024 – Present

Loan Origination Platform — UAE Bank *Apr 2026 – Present*

Multi-tenant lending platform with a borrower and admin console

- Built document-driven auto-fill across a 6-step loan application: documents uploaded at step one populate matching fields in every later step, cutting average completion time from ~20 minutes to ~10.
- Developed two new entity modules end to end — Dealers and Leads — in Angular 21, covering role-based access, server-side listings with search, filtering, sorting and Excel export, bulk upload with a per-row error report, and create/edit/summary screens.
- Localised both modules with ngx-translate across 6 locales including Arabic (RTL), replacing hardcoded strings with translation keys so new screens shipped translation-ready to every bank tenant.
- Worked in a shared micro-frontend codebase supporting deployments for multiple banking clients, managing release builds across environments, and conducting code reviews.

Angular Design System Library *Aug 2025 – Mar 2026*

Reusable component library and design language shared across enterprise applications.

- Architected an Angular design system library from scratch with 25+ reusable components, adopted across multiple enterprise applications and reducing UI development time by ~30%.
- Built an SCSS design token system on Angular 19 standalone architecture, enforcing styling consistency and improving long-term maintainability.
- Integrated Storybook for component documentation and built accessible components to WCAG and ARIA standards.

Medgami — Knowledge-Sharing Platform for Doctors *Jun 2024 – July 2025*

Content and community platform enabling doctors to publish and discover clinical knowledge.

- Delivered 10+ end-to-end UI features, from design implementation through to production deployment, working in Agile sprints.
- Implemented NgRx and Angular Signal Store for scalable, predictable state management across complex modules, improving application performance by ~20%.
- Led the migration of the application to Angular standalone architecture, improving scalability and reducing technical debt.

Software Engineer — Onnet Systems, Bangalore Nov 2022 – May 2024

OTT, IPTV and CAS platforms for video content administration.

- Developed a VSaaS Admin Console in Angular 17 with modular, reusable UI components, reducing manual configuration time by ~30%.
- Engineered a custom UI Builder tool using ng2-charts and Video.js, enabling administrators to compose dynamic pages and configure layouts across TV and mobile applications.
- Led the Angular upgrade from version 10 to 16, modernising application architecture and improving build performance and maintainability.

- Resolved 40+ production bugs on the Pishow OTT aggregation platform (ACMS) and reduced form submission errors by ~20% through stronger Reactive Forms validation and optimised API response handling.

Software Engineer — Tech Mahindra, Pune Feb 2021 – Jun 2022

Order management web applications supporting internal business workflows.

- Developed Angular UI components — order grids, activity logs and dashboard elements — for the FlowManage and FlowDesktop applications, improving visibility into order processing operations.
- Built reusable Angular 8 components, improving UI maintainability and consistency across the application.
- Analysed and debugged live production issues, working with backend and QA teams to deliver stable feature releases.

Internship Trainee — Tech Mahindra, Pune Nov 2020 – Jan 2021

- Completed training in HTML, CSS and JavaScript, building mini web applications to apply frontend development concepts in practice.

EDUCATION

B.E. Computer Engineering — SKNCOE, Pune 2016 – 2020

HSC — G. D. Sawant College, Nashik 2014 – 2016

ACHIEVEMENTS

- Champion of the Quarter award at Coditas for outstanding contribution to project delivery.
- Bravo Award recipient at Tech Mahindra for outstanding software development contributions.
- President of E-Cell at SKNCOE — led student initiatives and events, demonstrating leadership and team management.
